DETAILED ACTION

Allowable Subject Matter

Claims 1 – 6 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Claims 1 and 6 contain allowable subject matter because the teachings of the prior art of record taken as a whole do not show or render obvious the combination set forth including the "...the control element being responsive to loss of tension in the chain to release wedging element..." and "...control element ...restraining the roller cam..." as well as "...being arranged to release the roller cam...", respectively.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Abbott (US 859,719) is cited for reference of a safety device for elevators in which a wedging element is released upon the loss of tension in a cable, whereupon a biasing spring urges the wedging element to move to an active position, without an intermediary control element.
